A guide to using Patient Notes

Do you sometimes feel that patients haven't *really* heard what you told them?

Do you get tired of giving the same instructions over and over?

Do you have important things to tell patients but no time to do it?

Our Patient Notes are designed to help solve these problems. On the inside back cover you will find the latest one. Each Patient Note answers questions that patients often ask and gives clear and simple advice.

Make all the copies you want for noncommercial purposes and have them on hand to give to patients. Keep the original or a master copy so you can make new copies as you need them.

The subject is printed along the side and the handouts are numbered consecutively so you can file and retrieve them easily. We'll help you index them by periodically publishing a cross-reference index.
